

# Tehnologii de securitate implementate în rețele MPLS VPN

## Security Technologies Implemented in MPLS VPN Networks

**Bogdan-Alexandru BĂNUȚĂ**

### **Abstract**

*MPLS VPN is a family of methods for harnessing the power of multiprotocol label switching (MPLS) to create virtual private networks (VPNs). MPLS VPNs give network engineers the flexibility to transport and route several types of network traffic using the technologies of a MPLS backbone. This paper provides a method to implement architecture for a secure MPLS VPN network.*

**Index terms:** computer networks, network security, MPLS, VPN
