

New Challenges for Cybersecurity and Possible Criminal Law

Maxim DOBRINOIU

Nicolae Titulescu University, Bucharest, Romania
office@e-crime.ro

Abstract

This material describes some of the most significant new threats to Cybersecurity, with the view to better understand the diverse modus operandi undertaken by hackers and other online perpetrators in performance of their attacks, and to offer certain legal solutions to further be analyzed and perhaps adopted by the law enforcement agencies, prosecutors or courts of justice.

Index terms: advanced and persistent threat, clickjacking, cybercrime, ransomware, reconnais-sance attack, rogueware, watering hole attack, TDoS
