## **Abstract**

*The security of any nation mostly depends on the reliable functioning of critical infrastructures and on a strengthened resilience to possible crisis situations. As a link, strategic management should comprise grid monitoring activities and cyber threats that can exploit points of connectivity systems and generally quite seriously affect the financial area in particular. With a good risk management, cooperation between state institutions and the private sector, based on a set of standards and best practices, may lead to the construction of a stable social environment and business. The article proposes the presentation of a projection about financial sector correlated with systems Cyber-related frauds have been the most prevalent category of cybercrimes in this digital era. However, the fact that it has been defined and placed under different categories by different organisations all over the world has not made it easier to compare the data of incidents. This research was aimed to analyse the cyber-related fraud incidents in Malaysia based on a seven-year data of reported incidents. The researchers believe that some insights can be gathered by understanding the trend of occurrences of the said incidents.*

**Index terms:** cyber-related fraud, scam, cyber incidents, MyCERT, cybercrimes
