Abstract

Information protection is very essential these days to anyone using a pc or to any company that employs computers and networking in their day to day operations. That is almost everyone. Information protection need to be at the forefront of everyone's thinking in view that so a lot of our personal information is out there on the Internet. On this paper, the thinking of protection and privateness in social media, or social networking can be mentioned. First, a short history and the notion of social networking will be introduced. Many of the safety dangers related with the use of social media are presented. Also, the trouble of privateness and how it relates to security are described.

Index terms: security, information security, social networking
